What is an APM?

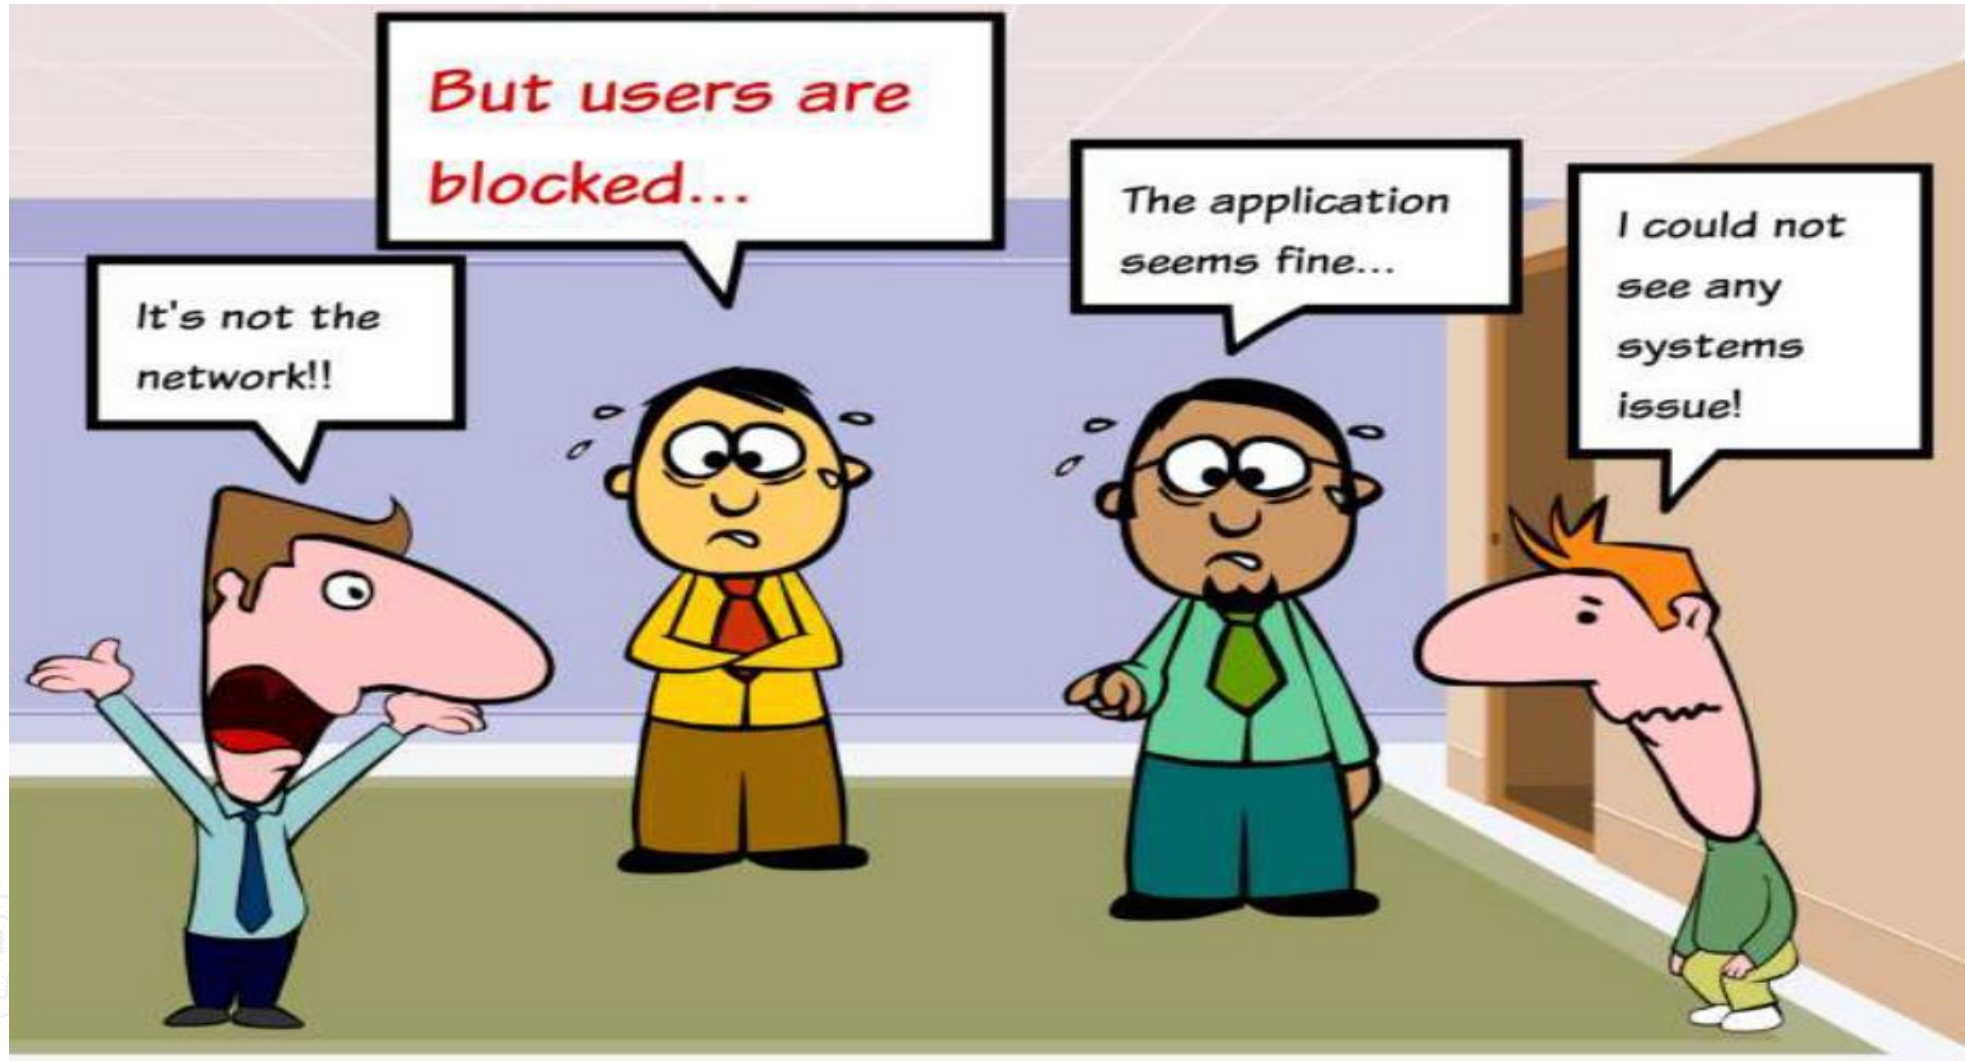

- Wikipedia
 - Application Performance Management (APM) is the monitoring and management of performance and availability of software applications.
- Pinpoint Github
 - Pinpoint is an open source APM (Application Performance Management) tool for large-scale distributed systems written in Java.

Why need an APM?

Why need an APM?

Why need an APM?

- Logs are distributed
- Delays and failures are often caused by other nodes, as well as edges in the call graph
- Need visibility to the whole architecture to identify root cause

Why is an APM?
